MS Office Interface
## Real-time data access for HTBasic

Share your data with Excel and Quattro Pro
Read, write & format cells
Create diagrams, run macros

Create documents for Word and WordPerfect
Format text, insert tables, bullets
HTBasic screenshots, run macros

Created by HTBasic using Tech Soft's MS Office Interface

Use Access databases
Manipulate tables & records
Initiate complex SQL queries

Complete Automation
Open, save & close documents
Run macros, queries, reports

Compatible with Office Suites from **Microsoft** and **COREL**
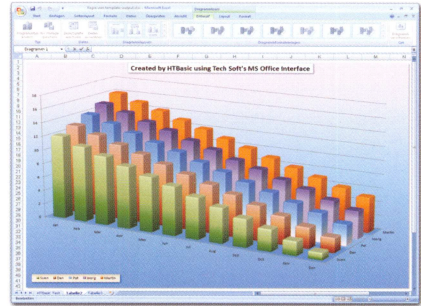

Microsoft Office Interface for HTBasic

The **Microsoft Office Interface for HTBasic** provides easy and fast data sharing between HTBasic and Office applications like Microsoft Excel, Word and Access, Corel Quattro Pro and WordPerfect.
The powerful function library simplifies programming and let's you focus on the real task: your application.

## Powerful and fast Microsoft Excel functions

The library includes functions to transfer complete HTBasic arrays into an Excel sheet and to read an Excel sheet back into an array. Depending on the speed of your computer you can reach transfer rates of 120,000 Excel cells per second.

You can format Excel cells (including date), create diagrams, insert image files, run macros and much more.

Support for major languages

Many of the Excel functions are specific to the language of Excel and the Windows regional settings. The library supports many major Excel languages including English, French, German, Dutch, Spanish, Italian and Portuguese (see documentation for more details). The language support is fully customizable.

Create Microsoft Word documents automatically

Many specialized functions are available for Microsoft Word. Insert formatted text (font, size, style, color, orientation), graphic files (including HTBasic screenshots), tables, header & footer, and manipulate bookmarks (create/delete/jump to) with one function call.

Easily manipulate Microsoft Access databases

It is easy to work with any MS Access database. Retrieve the structure of the database, read records, create tables, add fields to a table, insert records, or read the complete content of a table into an HTBasic array with one HTBasic function.

Even more, you can initiate complex SQL queries (e.g. in order to select records according to specific criteria). The software contains well documented, comprehensive examples.

Support for the Corel WordPerfect Suite

Examples for Quattro Pro and WordPerfect are included. In addition to the high level functions of the MS Office Interface library one can use the macro language of the Corel Office Suite in order to control these applications.

Automate your Office programs

Your Office programs can be automated. Start the desired application, open, close and save files, switch focus, work with the clipboard, run macros, or execute queries and reports.

Key features

- Fast and easy data communication between HTBasic & Office applications
- Very fast operation (up to 120,000 written Excel cells per second)
- Easy integration into your application due to application framework
- Function library with dozens of functions greatly simplifies programming
- Automatic detection of Windows locale settings and Excel language
- Comprehensive documentation, many included examples (Excel, Word, Access, Quattro Pro, WordPerfect, Internet Explorer etc.)
